

# Extinct Bands. Expensive Upkeep. It's time for an upgrade.

If your DAS feels like a dinosaur, it probably is—built for a different era, slow to adapt, and increasingly out of place in today's fast-moving, 5G-connected world. Legacy DAS systems can't support today's critical 5G, C-Band, or CBRS frequencies—leaving your building disconnected and your tenants frustrated. As Wireless Carriers sunset older networks and 5G becomes the new standard, upgrading your DAS isn't just a technical decision—it's a business-critical one.

**ASK YOURSELF**

## What a prehistoric DAS looks like

Big. Loud. Outdated. Your DAS was built for a different age—before today's speed and scale.

Is my DAS still built for a world before smartphones?

DAS is approaching 8-10 year lifecycle

Bulky equipment, outdated cabling

Hard-to-source replacement parts

Incompatible with modern tech stacks

Hurts lease-up and resale potential

## Feeding a fossil costs more than you think.

Legacy Solution

**3x** more likely to fail when 8 years or older

**3x** power consumption versus new solutions

**!** Risk losing coverage as Wireless Carriers sunset legacy bands

Upgraded Solution

Long-term ROI of tenant retention and increased property value

Future ready network, fully managed with upgrades built in

One-time infrastructure investment rolled into an OpEx model

### Limited Band Support

**✗** No support for 5G, CBRS, C-Band, or whatever's next

**✗** Locked into a Single Wireless Carrier  
Can't handle today's multi-tenant demands

**✗** Sluggish Speeds  
Dropped calls and poor data rates

**✗** High Maintenance  
Outdated hardware = more service calls

**✗** No Scalability  
Can't grow with your building or tech stack

## Evolving without extinction.

We offer a **lease buyout program** that replaces your aging DAS with a future-ready solution—without the upfront capital. We assess the value of your existing infrastructure and convert your CapEx model into a lease, bundling all future repairs, maintenance, and upgrades into one predictable monthly payment. You get a new DAS with the latest technology and lasting property value— while preserving your capital for other enhancements. Here's what's included:

**Complementary assessment** of your existing infrastructure

**Future-ready planning** that scales beyond today's needs

**Collaborative design** with our in-house experts

**Proactive coordination** across your internal IT, real estate, and finance teams

**Flexible architecture options**, including hybrid DAS + Wi-Fi

**Ready to upgrade from Jurassic Tech? Schedule a 15-minute DAS check up.**

Tillman Digital Cities (TDC) designs, installs, owns and maintains mobile connectivity solutions to solve today's challenges and plan for tomorrow's ambitions. As part of Tillman Global Holdings—which has deployed over \$10B in communications infrastructure in two dozen countries worldwide—connectivity is at our core. At TDC, we partner with Wireless Carriers, Service Partners and Enterprises to deliver custom, future-proof solutions backed by advanced technologies and a proven track record of excellence every step of the way.
